MR. LEDER: Dave Leder. I spoke before.

MR. BROWN: I know you did.

MR. LEDER: This -- first of all, this shouldn't be Yucca Mountain, anyway, but the way to handle radioactive fallout is to generate a frequency that will neutralize the fallout and reduce the radioactive waste back to the pre-refined state.

Now, there are crystals that can accomplish this by generating a higher frequency that will neutralize it, but it can also be done by generating a harmonic frequency with a combination of various substances and elements.

In other words, you create the configuration of minerals and other substance that was originally within the earth controlling the radioactivity for many eons.

Now this can be accomplished. Okay. This actually can be done. There is a way to neutralize radioactive fallout with certain configurations of minerals, elements and other substances, and I will be happy to work with your group to accomplish this. I actually can accomplish this and I'll charge you nothing for it, and my name is Dave Leder. I guess he I put my name on your list and it can be done.

Thank you.
